EDUCATION

Telkom University

Bachelor of Computer Science

Sep 2020 – Jun 2024

Indonesia

Telkom University

Master of Science in Forensic Science

Aug 2023 – Jun 2025

Indonesia

SKILLS SUMMARY

Programming Languages: Python, SQL, Java, C++

Frameworks: Pandas, NumPy, Scikit-learn, Matplotlib

Security Tools: FTK Imager, Autopsy, Volatility, Wireshark

Platforms: Linux, Windows

Soft Skills: Collaborated with cross-functional teams and communicated findings through structured forensic reports

WORK EXPERIENCE

Graduate Researcher – Digital Forensics & Cybersecurity

Aug 2023 – Jun 2025

- Designed network simulation experiments to analyze abnormal traffic patterns and attack behavior.
- Processed large-scale logs, extracted forensic artifacts, and performed statistical/ML analyses.
- Produced structured forensic reports and contributed to academic writing/publications.
- Collaborated with peers to develop incident response strategies and analysis workflows.

PROJECTS

Virtual Jamming Attack Detection using Neural Networks (Intellectual Property)

2024

- Developed an original neural-network-based approach to detect virtual jamming attacks in wireless sensor networks.
- Simulated attack and normal traffic scenarios to generate labeled datasets for training and evaluation.
- Extracted and analyzed MAC-layer features to distinguish jamming behavior from legitimate traffic.
- Achieved improved detection performance compared to traditional machine learning approaches.

Web Application Firewall (WAF) Internship Project

Jan 2025 – Jun 2025

- Assisted in designing WAF rules to mitigate SQL Injection and XSS.
- Analyzed application logs to refine detection logic and reduce false positives.

PLC Learning Web Application (Client Project)

2025

- Designed and developed a web-based PLC learning platform for a client to support industrial automation training.
- Implemented interactive learning modules covering PLC concepts, ladder diagrams, and control logic.
- Built backend services for user authentication, content management, and progress tracking.
- Focused on secure application design and deployment best practices.

Cryptocurrency Price Prediction using Machine Learning

2025

- Developed machine learning models to predict cryptocurrency price movements using historical market data.
- Performed data preprocessing including normalization, feature engineering, and time-series preparation.
- Trained and evaluated models using regression and classification approaches to assess prediction accuracy.
- Visualized prediction results and performance metrics to support analysis and model improvement.

INTERNSHIPS

Cybersecurity Intern – Web Application Firewall (WAF)

Jan 2025 – Jun 2025

Bandung Techno Park (BTP), Bandung

- Assisted in the design and implementation of a Web Application Firewall for a web-based system.
- Identified and mitigated common web vulnerabilities including SQL Injection, Cross-Site Scripting (XSS), and Bad Bots.
- Analyzed application logs to evaluate attack patterns and improve rule effectiveness.
- Gained hands-on experience in defensive security and secure application deployment.

IT Support Intern

Sept 2023 – Nov 2023

Primaya Hospital, Makassar

- Provided technical support for employee workstations and internal systems.
- Built and deployed a local Ubuntu package repository to enable offline system updates.
- Improved update reliability, reduced bandwidth usage, and enhanced internal network security.
- Collaborated with IT staff to maintain stable daily operations.

FTTH Design Planning Intern

Feb 2019 – May 2019

PT Telkom Akses, Makassar

- Supported fiber network planning and technical documentation using AutoCAD and Excel.

LANGUAGES

Bahasa Indonesia (Native) | English (Highly Proficient) | Japanese (Very Good)

TECHNICAL INTERESTS

Cyber Threat Detection, Digital Forensics, Secure Web Applications, Machine Learning for Security
